

Schertz Aerial Service Inc

Wind Turbine Policy

Wind Turbines and Met Towers are safety concerns for agricultural aircraft operations.

This policy is for Wind Turbine areas and for wind sampling (Met Towers).

Schertz Aerial Service Inc. may decline to spray fields based upon Wind Turbine concerns.

Area impacted consists of the field ordered to be sprayed and the surrounding one mile area around the field.

If we are able to do wind turbine areas, Schertz Aerial Service Inc reserves the right to implement a 50% application surcharge when wind turbines and/or wind sampling towers are within one mile and negatively impact aircraft operations.

Field map is required for the field that has wind turbines and/or wind sampling towers in the field and/or the surrounding one mile area around the field. This includes any new transmission lines from the wind turbines to the substations.

It would be very useful if know the GPS coordinates for the wind turbines and/or met towers in and surrounding your field. Please supply the information in the following format: DD° MM' SS.S".
