RE: Proposed IDNR Stream Setback and Turbine Siting

Dear Livingston County Board Members,

We are writing to express our support for the Livingston Wind Project being developed by EDF Renewables and in support of waiving the proposed Illinois Department of Natural Resources' (IDNR) setback for the perennial Broughton Creek, which passes through our property.

Livingston Wind Project has proposed a primary turbine on our property, tax assessor parcel number 12-12-24-200-002. While we have several properties signed into the project, this is the only turbine proposed on a property that we own. We understand from EDF Renewables that this is a favorable location that complies with the County's wind ordinance requirements. The IDNR's recommended setback is just that – a recommendation that is not based on any specific law.

Unfortunately, we have been told that there is not an opportunity to move the turbine on our property so that meets the proposed setback from the creek and still complies with other county requirements. If the county adopts this setback recommendation from the state, it will deprive our family of a significant source of income.

We own this property and have the right to determine what is best for our land. We urge you to waive the state's recommended setback and protect our property rights.

Sincerely,

Judith and Robert Rose
